

AMC Baltic launches iMIX 5 – an affordable zone router for audio installations

iMIX 5

AMC Baltic, manufacturer of professional speakers and electronic, presents its latest addition to the range of systems for paging and background music. The iMIX 5 zone router is a competitively priced five stereo output preamplifier designed for flexible, yet very intuitive signal routing for multi-zone audio installations. With 4 audio source inputs, connectors for paging station, emergency priority audio and external mute, integrated media player and ability to control using RS232 and wall panel controllers iMIX 5 is a solid device that end users will appreciate for its simplicity and ease of use.

WC iMIX

As part of the iMIX range AMC introduced modern looking touch sensitive wall controllers, that can be used to control each of the five iMIX 5 outputs – select audio source, adjust or mute volume, also external audio source can be connected directly to the controller, allowing it to be played in the local zone.

MIC iMIX pagestation

MIC iMIX

iMIX 5 supports multi-zone paging with MIC iMIX paging station. It allows users to make announcements in each zone separately or all zones together, use various chime settings. Device comes with gooseneck condenser microphone, has illuminated buttons, also features AUX input on the back for external audio source.

RS-485 interface used in iMIX iMIX paging station and WC iMIX controllers allows to reach the maximum connection length of 500 m between devices, and for shorter distances no external power supply is needed, as iMIX 5 router provides enough power for all connected devices, making audio equipment installing much faster and easier.
