

Amina Technologies Ltd

Press Release

28th January 2019

ISE: Stand N15E, Hall 1

Amina offer preconfigured 4 channel fixed install amplifier.

Amina Technologies, the British Invisible Speaker Design Company, will launch a 4 channel digital amplifier at ISE2019 offering total protection and unparalleled audio performance when used with the company's range of Invisible Loudspeakers.

The 1U high, rack mount Amina A100Q features no end user controls ensuring complete system security *within* fixed installations. The fully programmable amplifier features four line level inputs that are available to any one of four 100W power output stages. It also features two, line-level outputs and an internal Analogue Devices DSP processor, offering extremely capable and independent processing functionality to all six output channels that can all be configured individually with completely different algorithms.

Each channel can be delayed and features independent equalisation and soft limiting to ensure every speaker is both fully protected, no matter what is thrown at it. This provides optimal system performance for the end-user who then never has to think any more about the technology in his or her home.

The A100Q is fully programmable (via a PC link) and Amina will individually configure the unit to match integrators desired system architecture prior to shipping, tailoring the internal setup for specific speaker choice and system design.

Amina Technologies Ltd

Press Release

28th January 2019

ISE: Stand N15E, Hall 1

Amina offer preconfigured 4 channel fixed install amplifier.

The A100Q features full overload protection for any speaker load and, critically, has an impressively low noise floor. This allow users complete freedom to relax and enjoy high quality listening using the company's highly efficient and sensitive range of invisible speakers in the quietest of environments and with the most detailed of acoustic tracks.

More information on the new Amina A100Q amplifier and on the full range of Amina Invisible audio solutions can be found on Stand N15E, Hall 1.
