

TURN LINE– Rotating support system for Touch Screens up to 85”

The Turn product range is the new line for support systems / professional rotating stands for touch screen available for all the most well-known monitor brands (one or more monitors can be mounted on the same stand). Now also available for monitors up to 85”, it can be a perfect match with the new SAMSUNG FLIP 65 inches.

Thanks to the new patented Euromet system, Turn performs a slight yet stable and constant screen rotation by 90° with horizontal and vertical booth position without any fastening mechanism.

- The **TURN DELTA** offers the advantages of a standard stand, yet – with braking wheels – can ensure stability, easy handling and comfort when using and moving the touch screen also thanks to the reduced size of the support system itself

- The **TURN SLIDE** has one advantage more: it is equipped with millimetric height regulation.

It is therefore possible to adjust screen height even after rotating the screen itself, in order to ensure utmost board usability in any position.

Entirely designed and manufactured in Italy, it is characterized by design and care for details, while highlighting work furniture. The absolute product quality and long life are guaranteed as all other Euromet products.

It is ideal for creating, developing ideas, monitoring and share projects. Developed and designed for offices, architects, designers and creative people, digital and marketing agencies, meeting and conference rooms, training rooms, TV studios.
