

## **ONELAN CMS 3.4 delivers improved efficiency, functionality and security updates for enterprise deployments**

January 2019, UK: ONELAN, a global leader in digital visual communications, has released major updates to its digital signage CMS which include: a powerful new shared playlist feature to make managing content in multiple playlists or channels more efficient: a reduction in local storage requirements for System-on-Chip (SoC): and extra security protocols.

Ideal for large corporates or Universities with multiple sites or departments, the new shared playlist feature provides network administrators with a single interface to update content across the network in multiple layouts or channels. In addition, wherever the shared playlist is added, users have more flexibility over enabling or disabling playback. Content creation teams can make content available in bulk, and local departments can choose what to include for playback on their own signage, thereby giving greater autonomy.

As standard storage on SOC screens is typically limited to just 4GB of free storage, the new CMS also introduces a much-needed selective channel download feature to reduce local storage requirements and network bandwidth usage when publishing. This architecture significantly reduces the impact on users who have large amounts of media in their content channels.

Furthermore, the CMS now includes support for the latest generation LG webOS 4.0 plus additional enhancements to SoC functionality. This includes streamlining the software update mechanism, so updates can be rolled out on mass to multiple players, making management of large networks more efficient. Safeguards are inbuilt to ensure users only apply updates where appropriate and to minimise the impact on network bandwidth by staggering end-point updates.

With enhanced security, the system is now fully hardened to a broader range of vulnerabilities such as brute force password attempts with the introduction of additional security protocols. Network administrators are also able to set a range of password policies to mitigate the risk of user's credentials being compromised.

PRESS RELEASE

Further features to enhance the user experience have been implemented, including a new channel preview button, ad-hoc table editing, and for SoC, change layout playlist item and, publish now, activate later

Hugh Coghill-Smith, ONELAN Chief Commercial Officer commented; “We’re delighted to release these updates which are part of ONELAN’s global strategy to invest significantly in the ongoing development of our CMS, ensuring it remains at the forefront of digital signage software technology.

He continued; “This sophisticated solution makes network and content management even simpler and quicker, while delivering an engaging, dynamic experience for users – all key drivers for our continued investment.”

For more information on the new features, visit [www.onelan.com](http://www.onelan.com) for details.

These new features will also be demonstrated on the ONELAN stand at ISE 8-C282. For more information on the event visit <https://www.iseurope.org>.

#### About ONELAN

ONELAN, a Unigest company, is a global leader in the development and management of enterprise grade technology solutions for digital visual communication, including applications such as digital signage, wayfinding, data visualization and meeting room bookings. ONELAN’s robust, interactive solutions offer scalability and relevance across multiple market sectors, simplifying complex or diverse messages visualized on any device or display.

Organizations in education, corporate, retail and hospitality rely on ONELAN to deliver information to their target audiences. ONELAN has a proven international track record, implementing more than six thousand successful projects across Europe, the Middle East, Asia, Australasia and North America.

With a solid foundation and long history of profitable growth, ONELAN has a worldwide network of more than 300 accredited dealers and system integrators in 50 countries.
