

New model of the "Polichinelle" screen

To answer all types of requests, we have developed a second version of the projection screen Polichinelle. Without a High-Speed system, this second model becomes a standard Polichinelle with a new design and conception.

Like the Polichinelle High-Speed, the standard version is dedicated to large auditoriums, convention centers and theaters.

It is produced on demand for all image formats from 7 meters base to 20 meters beyond.

The only difference between the two versions comes from the faster motorization for the Polichinelle High-Speed.

However, the very rigid casing that is made with a welded aluminum tubular structure, winding mechanics and fastening are identical on both models. By design, the system is secure: the projection surface attached to the structure holds the winding tube, and 2 cables on each side accompany it.

The standard Polichinelle opens and closes at about 10s of the meter while the High-Speed version is 4.5 times faster. Its speed may vary depending on the dimensions of the screen.

Both versions are very simple to set up with only one electrical outlet to connect to the network.

To obtain additional safety, options are available such as the stop-fall device which connects the winding tube on each side of the casing to a pull-down cable with return spring. In the event of a sudden acceleration, the unwinding of the cable is blocked

The highlights of the Polichinelle screen:

- lightness and reliability of the whole system
- Roller tube in aluminium or carbon fiber for the largest sizes
- No arms in the lower part

- High rigidity
- Easy installation
- Security brake in case of power cut
- Barrel mounting
- Stop-fall device in option

Company Overview

Since 1947, ORAY Projection Systems specializes in design, manufacturing and marketing projection screens and audiovisual accessories.

Active in all fields, from theaters to schools, from congress centres to home cinemas, from businesses to simulators, all the projections or retro-projections are controlled and integrated into one of the most competitive ranges in the world. Present in over 50 countries, ORAY accompanies its distributors in their most ambitious projects.
