

# AUDAC Touch 2.0

Total system control

The Belgian pro audio manufacturer AUDAC will soon release the 2.0. update of it's already renowned AUDAC Touch app. AUDAC strongly believes in out of your pocket controllable audio solutions and with the Touch app you can control your entire audio installation and even more from one single application.

With this release of the AUDAC touch 2.0 update, AUDAC will introduce several ground-breaking new features such as Automatic Device Control. With this new feature the app will now automatically recognize and name all AUDAC devices in your system so you can easily add them to your dashboards and widgets.

In addition it is now also possible to add and control third party devices that support TCP/IP network commands directly from the app. This way you can not only control your AUDAC installation but also other smart devices such as your projector, lights or curtains making the AUDAC touch app a total solution. But also the compatibility with their own product range was addressed. As a result you can now mix and control the inputs of AUDAC's flagship matrix system, the M2 Multimedia digital audio mixer, directly from the app.

When developing this new AUDAC Touch™ 2.0 version, AUDAC's main focus was simplicity. As they really sought to bridge the gap between the extensive range of possibilities that the AUDAC products offer and an excellent user experience for all users, with or without technical backgrounds. Using this freely available solution, the installer now gets the configuration and usability of a consumer app but with professional functionalities.

Supported platforms include: Android, iOS and Windows.

You can find AUDAC at Booth 7-M190 or visit [www.audac.eu](http://www.audac.eu) for more information
