

RTI Builds Momentum in Commercial Market

ISE 2019 Highlights Include New VXU-SC Video Conferencing Solution, Miravue VIP-1 Video-Over-IP System, and Handheld and Touchpanel Control Interfaces

SHAKOPEE, Minn. — Jan. 8, 2019 — [RTI](#), a leading control and automation manufacturer for residential and commercial settings, today announced its product lineup for Integrated Systems Europe (ISE) 2019, taking place Feb. 5-8 in Amsterdam. In **Stand 1-N85**, the company will be showcasing media distribution and collaboration solutions for classrooms, lecture halls, and meeting spaces, including the new VXU-SC video conferencing system. In addition, the company's Miravue VIP-1 video-over-IP system and VMS-741 multiviewer will be on display, as well as sleek new handheld and touchpanel control interfaces.

“Last year at ISE we introduced a line of AV products to give dealers a comprehensive, end-to-end solution for automating commercial environments,” said Ed McConaghay, CEO of RTI. “In the year since, we’ve taken that momentum and channeled it into developing an array of powerful new solutions for collaboration, AV distribution, and monitoring. Our presence in the commercial space only continues to grow and we can’t wait to show off our latest developments in Amsterdam this year.”

Making its debut at ISE 2019, the VXU-SC video conferencing system enables simple and cost-effective collaboration, allowing multiple users to interact easily with software-based conferencing solutions such as Microsoft Skype®, Cisco WebEx®, and Citrix GoToMeetings®. In addition to support for video content from a wide range of devices, USB sharing also enables control from any connected PC, laptop, and interactive display, and allows inexpensive webcams and microphones to be utilized. Additional commercial solutions on display will include the VMS-741 multiviewer, which features seven video inputs, 4K video output, and can be configured for viewing up to four sources simultaneously on one display.

The RTI Miravue VIP-1 video-over-IP transceiver acts as a transmitter and receiver in one versatile device. Dramatically reducing cabling and installation time, the system enables powerful, scalable AV distribution over both wired and wireless Ethernet networking. In addition,

network video streams from IP cameras may be viewed without the need for additional equipment.

Handheld interfaces on display will include RTI's T4x flagship remote control, which is perfectly suited for any contemporary environment. Its sleek, sophisticated design offers superb ergonomics, a high-resolution 4-inch capacitive touchscreen, and fully programmable soft-touch buttons. The T4x sets the standard in wireless control with advanced features, including grip sensors, Wi-Fi, dual RF, and more.

Highlighted touchpanel controllers will include the KA8 and KA11, which feature fully customizable 8-inch or 11.6-inch widescreen high-resolution LCD displays with integrated capacitive touchscreens. The sleek devices are easily wall-mounted or can be used with an accessory stand for tabletop installation. Ambient light sensors automatically adjust the screen brightness, while built-in Ethernet with PoE powers the unit.

RTI continues to put the focus on enhancing the dealer experience with new software and training initiatives. The RTiQ cloud-based solution intelligently monitors RTI control system components and other electronic systems. Dealers are notified via email and text notifications if a failure occurs so they can perform actions remotely to correct the situation — eliminating the need for service calls to address simple issues and reducing system downtime. Additionally, the new RTIXCEL training programs are designed to provide dealers with a variety of training options to accommodate their busy schedules — anyway, anytime, anywhere. RTIXCEL Online, the new state-of-the-art online learning management system, allows dealers to learn more effectively and at their own pace, while the schedule of on-site training events and webinars hosted by RTI dealer experience managers is also expanded worldwide.

About RTI

RTI delivers the connected world to users' fingertips via advanced control and automation systems for smart homes and businesses. Guided by a passion for delivering the ultimate user experience, the company's award-winning solutions bring entertainment, environment, and security into harmony with a powerful ecosystem that is easy enough for anyone to use. The RTI portfolio offers beautifully designed remote controls, touchpanels, apps, processors and A/V distribution, all backed by the company's

renowned Integration Designer® programming software, enabling integrators to deliver complete custom control for their clients.

The RTI family of innovative control solutions includes Pro Control. Affordable and easy to program, this line of remote controls, processors, and ProPanel® app is engineered with RTI's advanced capabilities and brings unprecedented value to professionally installed electronic systems. Together, RTI and Pro Control are setting the standard for fully customizable control and automation solutions for every application.
