

Electro-Voice X-Line Advance Install delivers big sound in an installation-friendly package

- X1i and X2i installation-dedicated line-array loudspeakers deliver higher performance than previously possible from cabinets of this size
- Simplified, cost-effective rigging and multiple models for indoor and outdoor applications
- Optimized results when used with Dynacord IPX or TGX amplifiers

Burnsville, MN (September 2019) – With the launch of X-Line Advance Install loudspeakers, Electro-Voice offers consultants, integrators and installers big sound, precise coverage and proven reliability in an elegant and easy-to-use package. Based on the X-Line Advance series for live-sound applications, these new models incorporate the same EV-engineered transducers, crossovers and patented waveguide components.

The X-Line Advance Install consists of X2i-212 and X1i-212 12” two-way line array elements which are available with 90° and 120° horizontal coverage patterns, in black or white finishes, and in indoor or fully weatherized IP55 fiberglass versions. These compact and highly efficient two-way designs outperform many larger and heavier three-way systems, providing high SPL capability, extended high frequency response and linear low frequency extension. The X12i-128 double 18” subwoofer is available in black or white and in indoor or weatherized versions.

X-Line Advance Install shares multiple components and features with the live-sound series, all proven at the highest level of touring and event production. These include EV-engineered compression drivers and woofers coupled with the patented Advanced Pin Diffraction Hydra plane wave generator, for controlled and extended HF performance for the highest intelligibility. The unique Mid-band Hydra ensures tight midrange polar pattern control that results in improved acoustic coupling. X-Line Advance Install cabinets can also be hung in symmetrical arrays to achieve optimal sound imaging.

The X2i-212, X1i-212, and X12i-128 each come equipped with four M10 rigging points on each side; aluminum rigging kits are available for each two-way model. The black or white color choices, compact form factors and logo-free grilles give the cabinets an understated look that blends in easily with their architectural environment.

By combining X-Line Advance Install cabinets with the award-winning Dynacord IPX and TGX amplifiers and the new SONICUE sound system software, specifiers can deliver the network infrastructure and complete back end of a large-venue audio system with Dante audio transport and AES 70-compliant control.

X-Line Advance Install models will be available in February 2020.
