BluOS®

Monitor Audio To Demonstrate New IMS-4 Music Streamer At ISE 2020

Monitor Audio is delighted to announce that it will be demonstrating its new IMS-4 Music Streamer at ISE 2020. This year's exhibition is the first opportunity to see and hear the exciting new addition to Monitor Audio's range of superior custom install solutions.

Featuring BluOS™ technology, the slimline IMS-4 can stream to four separate zones and its BluOS Controller app offers complete flexibility, including streaming from music services, easy access to music libraries and voice control through a smart device.

Accessed through the app, or one of the many supported integrated control systems, multiple IMS-4 Music Streamers can be integrated with other BluOS devices to provide up to 64 zones of music, with each zone able to play together in perfect sync or play different streams to separate zones. And, BluOS allows streaming of lossless music up to 24-bit/192kHz to every room in a home network.

With BluOS the IMS-4 delivers millions of Master Quality Authenticated (MQA) recordings, presenting music that can be heard exactly as the artist intended and approved by the studio, providing a seamless music experience anywhere in the home.

Monitor Audio recommends that the IMS-4 is partnered with an installation amplifier such as its IA150-8C. Integrated with Crestron, Control4 and RTI, the IMS-4 is also compatible with other BluOS enabled devices.

Michael Hedges, Monitor Audio's technical director, said, *'I am delighted to be able to demonstrate our IMS-4 Music Streamer at ISE. I am sure that the visitors to our stand will be delighted by both its performance and versatility.'*

Monitor Audio would like to invite ISE attendees to visit its stand to experience the new IMS-4 and the other custom install solutions it will be showcasing.

ISE DETAILS:

When: 11th to 14th February 2020

Monitor Audio stand: Hall 5-R85

Where: Amsterdam RAI, Europaplein 24, 1078 GZ, Amsterdam, NL
