
TOA Presents Integrated Solutions for Safety and Communication at the ISE 2020

At the ISE 2020, TOA will demonstrate its integrated solutions for safety and communication in public buildings. Expectations towards sound solutions are more complex than **voice alarm, public address** and **intercom** taken individually. Modern approaches in building safety and acoustics require a sensible combination of all these applications. TOA delivers this **system integration** – as per your requirements and with the well-known **quality and longevity of TOA's products**.

One of TOA's key products at the ISE is the **VX-3000** – a highly integrated voice alarm system which is fully EN 54-certified and just recently has been upgraded with a major firmware upgrade for more flexibility and efficiency. Due to its network-based architecture it can easily be scaled up to a maximum of 2560 speaker lines and 1280 remote microphones. The already flexible system is complemented by the **VX-3308WM** – a compact all-in-one version for small or remote locations, for example the many floors of a high-rise building.

In cooperation with **AviaVox** TOA will showcase a state-of-the-art solution for creating automated and yet human-like sounding announcements at airports. With its unique phoneme technology AviaVox is able to generate fully natural passenger announcements in a multitude of languages, which then are distributed by TOA's voice alarm and public address systems in the airport's designated zones – with the speech intelligibility that TOA is known for.

Further product highlights at the ISE 2020 include new wireless conference systems, a visitor guide system, multi-channel power amplifiers, certified variable line array speakers as well as intercom and collaboration solutions. Moreover, TOA's audio and network experts will hold short presentations about new developments in **IP audio technology, airport solutions, acoustic planning and simulation** as well as highly **integrated voice alarm and public address systems** throughout the exhibition's entire duration to inform customers and interested visitors.

The highly integrated systems and solutions by TOA cover a wide range of applications, from solutions for restaurants and retail to large building complexes such as industrial plants and airports. See for yourself **at the ISE 2020 at booth N200, hall 7**.
