URC LAUNCHES 2-WAY INTEGRATION OF TOTAL CONTROL WITH SYMETRIX RADIUS NX, PRISM, SOLUS AND EDGE HIGH PERFORMANCE DIGITAL AUDIO SIGNAL PROCESSORS

Easy Control of audio output levels from one URC Total Control touch screen in a wide variety of commercial installations

AMSTERDAM, NL (February 11, 2020)—URC, a global leader in smart automation and control for residential and commercial applications, launched today a 2-way IP module for integration of its award-winning Total Control system with Symetrix Radius NX, Prism, Solus and Edge DSP models. The module, available today to authorized URC installers via URC’s dealer portal, allows commercial facilities managers using any URC Total Control touch screen or the Total Control smartphone application to control independent channels or zones of audio routed thru compatible Symetrix DSP models.

“The addition of these new models from Symetrix to our portfolio of two-way modules greatly expands the commercial applications – from bars and restaurants, houses of worship, meeting rooms, to larger venues such as whole resort facilities, banquet halls and stadiums,” said Lars Granoe, URC’s Vice President of Product Management. “Symetrix is world-renown for delivering high performance audio DSP hardware and software, making it a great fit for our URC Total Control line.” URC launched an integration module with the Symetrix Zone Mix 761 last year.

This two-way module allows commercial facilities managers, IT departments, and staff using a URC Total Control touch screen or the URC smartphone app the ability to select the audio inputs for each zone and then adjust and mute the volume levels by zone. The URC Total Control user interface presents the end user with a digital slider graphic for volume control along with the exact percentage volume level of the maximum gain set by the commercial integrator, as well as dedicated volume up and down buttons for precise level setting of each channel / zone.

Authorized URC commercial integrators can easily download the two-way IP module from URC’s dealer portal.

Total Control 2.0 is URC's smart automation and control system featuring premium performance, highly customizable GUIs and robust third-party integration. Total Control 2.0 is perfect for commercial facilities such as bars & restaurants, conference rooms & executive offices, common areas & amenities spaces in multi-dwelling units, hospitality and classrooms.

Interested systems integrators can email totalcontrol@universalremote.com to learn more.

About URC

Headquartered in Harrison NY USA, URC is a global leader in smart automation and control. URC technology is respected for unsurpassed performance and reliability with over 100 million remote controls sold in the past 10 years alone. URC control systems include Total Control, MX HomePro and Complete Control. Legendary URC user interfaces include tabletop controllers, in-wall touchscreens, handheld remotes, keypads and mobile apps – plus voice control integration with Amazon Alexa and Google Assistant. URC systems are custom designed, installed and maintained by a network of URC trained systems integration professionals. For more information visit universalremote.com.
