

BXB's Q.con Video Conferencing Solution

BXB provides simple and quick video conferencing solution. Q.con (Quick-connected) possesses outstanding video and audio quality. The user-friendly installation makes you carry out a meeting easily. Q.con holds the features as below:

- 1) "Look at Me" speaker's image auto-tracking:** the video conferencing equipment in the recent market usually works with high-sensitivity microphone, which can receive all attendees' sounds. However, it would also receive the surrounded noises. The private discussion would be controlled by the other side. Q.con's camera can auto-detect the speaker's voice and close up the image, clearly showing the speaker's facial expression and ensuring the discussion privacy.
- 2) Compatible with mainstream messaging software:** support Skype, Hangouts, LINE, etc, making users enjoying the meeting as easy as used to be.
- 3) Smart sound processing:** Each Q.con 's microphone can accurately recognize human voice and avoid receiving other noises such as applause and private discussions. Moreover, the auto-on function can solve the problem of forgetting pressing the speaking button. 30/45 seconds after the speaker finishing talking, the microphone would also turn off automatically.
- 4) Plug-and-play USB without installing any driver:** Q.con's interface and installation are user-friendly. Just use USB cable connecting with your PC directly to hold a basic video conferencing. There's no extra driver needed for the system. You can also use HDMI cable connecting with LCD

monitor to make the meeting agenda or discussion content show on the screen with broader mode, which enhances meeting efficacy.

Q.con can be applied on company meeting, customer service, educational training, counseling, and project collaboration. This video conferencing solution helps you easily carry out a multi-field communication mode, which makes people closer and make knowledge transmission more efficient and faster.
