Technomad launches best in class, compact, weatherproof loudspeaker line at ISE

The redesigned MP Series line offers unmatched audio performance in the compact weatherproof loudspeaker market.

BOSTON, January 30, 2020 –

Technomad will be introducing the most powerful, compact weatherproof loudspeakers in the pro audio market at the Integrated Systems Europe show in Amsterdam. Combining high output compression drivers with state of the art low frequency drivers, the MP Series has been redesigned to offer unparalleled audio performance from a low profile, weather-proof loudspeaker. These speakers allow designers and installers to use fewer, more effective loudspeakers to achieve the same coverage as multiple, lower quality weather-resistant loudspeakers in background and foreground sound applications. All models are available with an optional 70/100V transformer option.

Made with recycled, solar molded polyethylene cabinets, the MP Series are also among the greenest loudspeakers available. By building products which provide years of service free operation in even the toughest environments, Technomad products also reduce waste through longevity.

Visit the Technomad booth at 5-W120 to learn more.

ABOUT TECHNOMAD

Technomad LLC, founded in 1995, designs and manufactures loudspeaker systems for the professional audio and security/military technology industries. The company invented the first reliable full-range weatherproof loudspeaker and now offers eight models ranging in power from 150-watt loudspeakers to 1500-watt subwoofers — most available in Turnkey PA System packages featuring amplifiers, mixers and other signal processing equipment in pre-wired racks. The company also manufactures a variety of audio infrastructure and communications equipment including playback and recording systems, weatherproof power amplifiers and turnkey remote audio systems. Contact Technomad at 617-275-8898 or visit www.technomad.com for more information.
