Technomad showing line of green loudspeakers at ISE Europe.

The full Technomad line of loudspeakers is made using industry first, green technology.

BOSTON, January 30, 2020 –

Technomad is the first pro audio manufacturer to adopt zero emission solar molding technology for use in the production of loudspeaker cabinets. Unlike traditionally molded plastic speakers which require fossil fuels to heat the material to melting temperatures, Technomad partners with Light Manufacturing to use focused solar energy for that process. For black speakers, only recycled plastic is used to form the cabinets to further reduce the carbon footprint of production. Unlike traditional wooden enclosures, there is no waste generated during the production of Technomad cabinets.

Unlike cheaply made weather-resistant loudspeakers, Technomad products are designed and built to last in even the toughest environment. This further reduces the amount of waste by providing the end customer with a product which will not need replacement and disposal after a season or two of exposure to the weather.

Visit the Technomad booth at 5-W120 to learn more.

ABOUT TECHNOMAD

Technomad LLC, founded in 1995, designs and manufactures loudspeaker systems for the professional audio and security/military technology industries. The company invented the first reliable full-range weatherproof loudspeaker and now offers eight models ranging in power from 150-watt loudspeakers to 1500-watt subwoofers — most available in Turnkey PA System packages featuring amplifiers, mixers and other signal processing equipment in pre-wired racks. The company also manufactures a variety of audio infrastructure and communications equipment including playback and recording systems, weatherproof power amplifiers and turnkey remote audio systems. Contact Technomad at 617-275-8898 or visit www.technomad.com for more information.
