spo-comm presents high end Mini-PC with Nvidia RTX 2060

Nuremberg 01/09/2020 – At the ISE 2020 in Amsterdam the spo-comm GmbH proudly announces the new KUMO V, which continues the successful series of industrial Mini-PCs for performant graphics solutions. The newest model convinces with a dedicated Nvidia Turing graphics card for multimonitor and 4K/8K applications.

This innovative high end Mini-PC is the latest model of spo-comm's famous KUMO series. What's new about it is that customers can choose between different graphics cards of the Nvidia Turing generation: the Nvidia GeForce RTX 2060 or the GTX 1660 Ti – They are capable of Raytracing, CUDA and various other interesting features. In combination with an Intel Core i5 9300U CPU, this ensures outstanding performance and allows demanding digital signage applications, control of several monitors as well as rendering content in 4K or 8K. Like all industrial PCs from spo-comm, the KUMO V has a compact and robust metal housing and is suitable for 24/7 use.

In **Hall 8 at booth G272** spo-comm presents the new KUMO V. Their Swiss partner Advertima and its same-named Artificial Intelligence already make use of the new Mini-PC and will showcase the solution at the spo-comm booth. Besides spo-comm exhibits passive cooled systems, rugged and vehicle solutions as well as compact Digital Signage players.

spo-comm offers Mini-PC solutions for industry and trade in Germany and Europe with a special expertise for digital signage. The specialist's portfolio ranges from hardware, software, and services up to complete supply chain management – always with a perfect fit and based on an expertise that exactly meets the customer's requirements thanks to modularly combined service components. spo-comm has a dense network with a global presence of hardware partners, is amongst others most important partner of MSI IPC in Europe and was founded in 2002. CEO is Michael Sporrer.
