

**PRESS RELEASE**

For Immediate Release

## **Prestop creates unique touchscreen solutions in every shape and size**

People and companies are unique and mostly we are doing our utmost to show how unique we are. Strangely enough, when it comes to presenting products and services, often a standard solution is chosen. Fortunately nowadays almost everything is possible to create a touchscreen solution with different materials in every shape and size! Even curved displays can be made interactive. Or choose to turn your design table into a touch table. Also it is possible to make a touch table made of HiMacs, a delicate composition of acrylic, minerals and natural pigments that combine to create a smooth, non porous, thermoformable and visually seamless surface.

At ISE 2019 Prestop will present a unique HiMacs touch table with a 65" PCAP touchscreen and additional LED lighting, designed and produced in the Netherlands. You will also find interactive mirrors, order kiosks and a kiosk with a 32" curved touchscreen. All unique touchscreens solutions!

Prestop is exhibiting at ISE 2019 (8-E330), taking place at the Amsterdam RAI from 5-8 February.
