

Airzone celebrates great debut at ISE2020 in Amsterdam

Amsterdam, the Netherlands — March 9, 2020 — On February 11 HVAC control solutions company Airzone participated in the Integrated Systems Europe exhibition held in RAI, Amsterdam for the first time. Airzone showcased their innovations, met with integrators and created strategic ties for their potential growth in the global integrated HVAC market.

The latest innovations of Airzone didn't fly under the radar as the public response was positive, giving the Spain-based company great networking opportunities during the show.

One of the innovative products promoted during the exhibition was the HVAC control solution, "Aidoo Inverter/VRF Wi-Fi Controller".

Aidoo allows HVAC systems to have IoT functions enabling Cloud control, intelligent operation programming, remote diagnostics through two-way communication thanks to certified communication protocols among other benefits. Aidoo not only solves the problem of smart HVAC control in tertiary buildings, but it also improves the residential HVAC applications considerably.

Following Aidoo's official launch at CEDIA2019 in Denver, Colorado, Airzone represented the product in front of a big audience this time in Amsterdam.

"We were welcomed by the public from the very first day and connected with several industry professionals. We are excited about the interest shown by integration pros for our HVAC control solutions and the potential for the residential market they foresee" said Adrian Ramos, General Manager for Airzone Europe.

With more than 20 years' experience and the trust of professionals in the HVAC sector alongside the partnerships the company has with the main HVAC equipment manufacturers, Airzone claims that the end-users can benefit from the following key features:

- The communications protocols of Airzone products are certified and directly developed with the HVAC/IT manufacturers.
- Their expertise is far beyond just developing gateways, Airzone develops integrated HVAC control solutions.
- A to Z top service for specifications and tech support in HVAC applications.

Airzone booth 9-B120 located at the Smart Building Pavilion which displayed different HVAC integration solutions was visited by numerous integration professionals during the show.

One of the assets of utmost importance offered by Airzone to the integration professionals is the company's role serving as a solid bridge between the IoT and HVAC worlds.

During the show the professionals also got to learn about the Airzone zoning solutions like Easyzone. This solution grants a quick and easy per zone temperature control on ducted HVAC systems.

"Right now, we are nurturing our latest contacts that will surely be strengthened in the next episode of the exhibition moving to Spain with the ISE2021 Barcelona" assured Ramos.

About Airzone

For over 20 years, Airzone has been offering innovative control solutions that enhance the management and improve the energy efficiency of various heating and cooling equipment, for both commercial and residential applications.

Airzone control systems easily integrate with the leading building management systems and technologies such as Cloud control and voice commands through virtual assistants.

Since its foundation, Airzone has opted for a model based on technical research, industrial development, and manufacturing with EU quality standards.

A benchmark in the HVAC industry and with presence in more than 20 countries, Airzone has its own offices in Spain, Italy, France, and the US.
