

# Cybernetyx showcases Galileo One – World's First AI Powered Interactive Device for Education, at ISE 2020, Amsterdam

*With multi-touch capabilities, a tracking speed of up to 120 frames per second and a response time of up to 195 million dots/second, Galileo One is the world's first AI powered device that transforms any standard display or panel into seamless touch interactive and collaborative learning space with augmented capabilities.*

**Bangalore, January 22, 2020:** Cybernetyx is exhibiting a range of innovative products at ISE 2020. With a commitment to improve teaching and learning processes with technology-based solutions, Cybernetyx is showcasing Galileo One.

Designed exclusively for panels and flat displays, Galileo One is a wireless interactive teaching device, that comprises of powerful processor and the most advanced in-built touch technology that allows up to 10 touch points in an ultra HD picture quality that presents the details without any distortion.

The device has an array of teaching tools including handwriting and shapes recognition, mathematical tools and smart draw, which makes teaching fun and interactive. For intuitive teaching, the device is integrated with educational search engine, wherein any topic can be searched, and results will appear in the form of text, video and images.

“Cybernetyx developed digital devices for education on the belief that traditional methods should not rule the contemporary ways of teaching and learning, and our intelligent, adaptive, simple and perceptive devices should empower the learners and instructors across the globe”, said Ramya Chatterjee, CEO of Cybernetyx.

**Galileo One** has an in-built AI Cloud, which stores the data on the cloud and makes it accessible for authorized users from anywhere, anytime. Using this device, teachers can plan their lessons in prior, store it on Kneura Cloud and access it anytime they want while students can go through the assignments or lesson plans shared by their teachers.

**About Cybernetyx**

*Cybernetyx, a leading name in smart sensing and interactive technology is showcasing AI-powered interactive devices for displays for Education and Enterprise at ISE 2020.*

*Cybernetyx Group was founded in 2009 in Germany & India with a purpose to combine connected computing, sensing and intelligent algorithms to design devices and platforms which can foster human-machine symbiotic experiences. These devices influence several aspects of our lives including when we're at our homes, our learning and workplaces, while we're at public spaces and inside our automobiles — and thus, transform our entire life experience.*

*Cybernetyx is amongst the world's largest OEM interactive technology suppliers to top display manufacturers of the world such as NEC Display, ViewSonic, Delta, Sony and others – empowering millions of devices worldwide. Cybernetyx has sold and deployed more than 135,000 EyeRIS® interactive classroom solutions in India, one of the largest by any company in the country so far.*

*With the mission of leading AI innovation to power the future, Cybernetyx has independently developed a deep learning platform, a range of microcomputing devices, and core technologies such as face recognition, image recognition, object recognition, text recognition, medical image analysis, video analysis, autonomous driving, and remote sensing. In doing so, Cybernetyx has become one of the world's most focused machine intelligence and smart equipment companies.*
