

Nureva to showcase expanded solutions and new functionality at ISE 2019

New collaboration features, security enhancements, ecosystem program and more provide customers with a tightly integrated experience in a secure environment

Calgary, Alberta --- November 28, 2018 --- Nureva Inc., an award-winning collaboration solutions company, announces its participation in Integrated Systems Europe (ISE) at the RAI Amsterdam from 5 to 8 February 2019. The company will showcase new features and security enhancements in Span™ Workspace that are designed to support organization-wide transformation of collaborative processes. Nureva will also offer live demonstrations of its HDL300 audio conferencing systems running on multiple platforms. This is Nureva's fourth consecutive year as an exhibitor at ISE, and its new exhibit space in the UCC Hall (stand 11-B180) is its largest ever.

The company's global customer base has grown steadily over the past year, and customer feedback continues to guide Nureva's investment in product enhancements that deliver tangible business value. Part of this value is derived from interoperability with other products and technologies, and the company will share its plans for expanding its ecosystem to deliver the integrated experience that customers demand. Another area of rapid growth has been with Nureva's global channel, and the company will be actively recruiting distributors and resellers in select countries at ISE.

Press attending ISE 2019 can receive a full demonstration of Nureva's products during two special press events on Nureva's stand 11-B180. Press briefings can also be scheduled anytime outside the noted days and times:

- Tuesday, 5 February at 11:00 a.m.
- Wednesday, 6 February at 1:00 p.m.

"We are delighted to be back at ISE with a larger presence and our expanded solutions for collaborative spaces," says Nancy Knowlton, Nureva's CEO. "The company has experienced significant growth over the past 12 months, and we're excited to share the highlights with the global community of AV professionals and systems integrators."

About the Nureva visual collaboration solution

The Nureva visual collaboration solution combines Span Workspace with the Nureva™ Wall. It is designed to support highly collaborative activities that benefit from visualizing and interacting with information on a large surface, including structured processes such as lean, agile and design thinking. Span Workspace provides an expansive cloud-based digital canvas that can be tailored to suit virtually any collaborative activity. It draws upon familiar, simple and flexible tools including sticky notes, sketches, images, templates and screen sharing. Participants contribute and interact with the

content using their personal devices, whether a computer, tablet or smartphone, or directly on the Nureva Wall or other interactive display. The Nureva Wall transforms collaborative spaces by creating large, ultrawide interactive surfaces that turn walls into expansive digital workspaces with high-performance multitouch and inking capabilities. The Nureva Wall is optimized for use with Span Workspace and can incorporate users' preferred applications, including Microsoft® Office, Adobe® products and AutoCAD® software. For more information, visit the [visual collaboration](#) section on the Nureva website.

About the HDL300 audio conferencing system

The HDL300 audio conferencing system resolves the frustrating and persistent issue of poor audio pickup, especially in dynamic rooms where participants move around the room. When combined with the Nureva Wall or other interactive display, the HDL300 system can also be used as the primary source for audio and video playback. At the core of the HDL300 system is Nureva's breakthrough Microphone Mist™ technology, which places thousands of virtual microphones throughout a room to pick up sound from any location to ensure that everyone is clearly heard regardless of where they are in the room or the direction they are facing. The system uses sophisticated algorithms to simultaneously process sound from all virtual microphones to provide remote participants with a high-quality listening experience, enabled by continuous autocalibration, simultaneous echo cancellation, position-based automatic gain control and sound masking. The HDL300 system is designed to work with Skype® for Business, Zoom, Blue Jeans, Cisco® Spark, Cisco WebEx®, GoToMeeting™, Pexip® Infinity Connect and other common UC&C applications. For more information, visit the [HDL300 section](#) on the Nureva website.

About Nureva

Nureva Inc. is a multiple award-winning private company that imagines and builds solutions for tapping the creative and problem-solving potential of diverse teams around the globe. For businesses, that means enabling the group creative processes that are used to solve problems and develop breakthrough ideas that drive organizational advantage. In education, it means enabling the student-led, collaborative activities that deepen learning and equip students with the skills required for future success. A passion for deep customer understanding and a commitment to innovation drive the company's product roadmap. For more information, visit [Nureva's website](#).
