

FOR IMMEDIATE RELEASE

Nureva™ Console supports broadscale deployment of Nureva audio systems

New cloud-based platform delivers enterprise scalability and remote management of full Nureva audio conferencing product line

Calgary, Alberta --- January 14, 2020 --- Nureva Inc., an award-winning collaboration-solutions company, announces [Nureva Console](#), a new cloud-based platform that makes it easy for organizations to manage their [Nureva audio conferencing systems](#) across multiple locations, from a single, secure dashboard. Nureva Console combines a simple web client that installs on Windows® and Mac® meeting room computers and a cloud-based dashboard that can be accessed remotely. Together, they provide an intelligent platform to enroll, configure and maintain every Nureva audio system to enable faster, hassle-free adoption throughout an organization.

From Nureva Console, IT managers can remotely determine the state of a Nureva audio system to see if it is set as the default audio device, if the firmware is up to date and whether it is powered and connected to a computer. System information, such as model details and serial numbers, is also available. Once a Nureva audio system is enrolled through Nureva Console, customers receive an additional year of warranty, from two years to three. Looking forward, Nureva Console provides the infrastructure for deep integration between Nureva audio and other third-party solutions. New functionality will be added to Nureva Console frequently. For example, in the near term, IT managers can integrate their room booking and room control systems with Nureva's new [HDL200 system](#) from Nureva Console.

"We are excited to offer customers a simple, enterprise-class management service that delivers the scalability and flexibility they need for broad deployment of our systems," said Nancy Knowlton, Nureva's CEO. "With the addition of the new HDL200 system and this service, customers now have the opportunity to easily bring the advanced performance of [Microphone Mist™ technology](#) into more of their spaces."

Additional feature details

Mac and Windows support

IT managers can now control, configure and update Nureva audio systems on Mac and Windows computers

Device status dashboard

In a single view, the Nureva Console dashboard provides users with information on all Nureva audio systems.

Remote device management and control

Nureva audio systems can be managed remotely from a single dashboard to determine the state of each system. Information includes default device status, firmware version, power status and system details.

Remote firmware updates

In the spring, IT managers will be able to update Nureva audio firmware from Nureva Console and preschedule the updates for a convenient time outside of meetings.

Pricing and availability

Nureva Console will be available in March 2020 to all Nureva audio conferencing customers at no additional cost. When customers enroll their Nureva audio system through Nureva Console, they will receive an additional year of warranty at no extra cost. Nureva Console supports the full line of Nureva audio systems.

Press events

Press and analysts attending [Integrated Systems Europe](#) (ISE) in Amsterdam from February 11 to 14 can learn more about Nureva Console and the full line of Nureva audio conferencing products during three special press events on Nureva's stand 11-D160 in the Unified Communications hall. Live remote demonstrations of Nureva audio systems can also be scheduled anytime outside the noted days and times.

- Tuesday 11 February 11:00 a.m.
- Wednesday 12 February 10:00 a.m.
- Thursday 13 February 10:30 a.m.

About Nureva audio conferencing systems

Nureva audio conferencing systems resolve the frustrating and persistent issue of poor audio pickup, especially in dynamic environments where participants move around the room. At the core of the systems is Nureva's patented Microphone Mist technology, which places thousands of virtual microphones throughout a space to pick up sound from any location to ensure that everyone is clearly heard regardless of where they are in the room or the direction they are facing. Users also have the option to limit the audio pickup to a specific zone within a space, such as the front of the room, making it ideal for corporate presentation scenarios and lecture capture in higher education. The systems use sophisticated algorithms to simultaneously process sound from all virtual microphones to provide remote participants with a high-quality listening experience, enabled by continuous autocalibration, simultaneous echo cancellation, position-based automatic gain control and sound masking. When combined with the Nureva Wall visual collaboration solution or other interactive display, Nureva audio conferencing systems can also be used as the primary source for audio and video playback. The systems are designed to work with Microsoft® Teams, Skype® for Business, Zoom, RingCentral®, Google™ Hangouts™, Cisco WebEx™, GoToMeeting® and other common UC&C applications. Current models include the [HDL300 system](#), [Dual HDL300 system](#) and the [HDL200 system](#). For more information, visit the [Nureva website](#).

About Nureva

Nureva Inc. is a technology-rich, multiple award-winning private company that imagines and builds solutions that make it easy to unlock the collaborative potential of diverse teams around the globe. For businesses, that means enabling the group creative processes that are used to solve problems and develop breakthrough ideas that drive organizational

advantage. In higher education, it means enabling collaborative activities that deepen learning and equip students with the skills required for future success.
