

OPUS TECHNOLOGIES

SMART LOOP MODELING SOFTWARE, A STEP AHEAD

Opus Technologies, is a French manufacturer of magnetic induction loop amplifiers for people with hearing loss. With 10 years of experience in audio technologies, we work to expand the hearing accessibility with most advanced solutions.

This year we are proud to presents our Opus Smart Loop modeling software.

Each loop layout is unique and must meets the IEC60118-4 standard for consistent listening. It must consider multiple and complex factors such as room size, interference, privacy needs, or presence of metal elements.

Thanks to years of research and our expertise in the field of hearing accessibility, we have developed a unique and powerful tool for the creation of complex modeling to provide accurate technical studies for each project.

Opus Smart Loop is accessible from our website and will allow our partners to carry out their own studies and precisely define the type of equipment required.

Come and and visit us on our booth 7-V245, and ask for a personalized demo
