

Powerful - Colourful - Strong

the new kvm-tec customized system - *FLEXline* @ ISE 2020

ISE, February 2020 – the perfect place to show the new kvm-tec productline *FLEXline* – the customized system and the media4Kconnect now also in uncompressed version.

“Our new FLEXline is a very clever and customized system – we developed it especially for the needs of our customers! Ultra-slim, redundant, single or dual, fiber or copper and many upgrades and functionalities are already included” says the head of the kvm-tec family and technical brain Ing. Dietmar Pfurtscheller. “And we are very happy that we can show it, as well as the product video – which we are really proud of - for the first time at the ISE 2020 in Amsterdam. The kvm-tec team is looking forward to welcome and meet all partners, friends as well as 4K fans and the KVM audience at the kvm-tec booth 5.V110”, says Head of Sales Ingrid Pfurtscheller, MSc.

The new *FLEXline* – a short overview & what makes it special

All *FLEXline* Full HD Extenders have an ultra slim casing and are available in a single and dual version. *FLEXline* saves you space in a Rack - 4 single or 4 dual Extenders in 1RU. For high security at critical applications, *FLEXline* single Extenders are redundant. Additionally they have embedded sound.

The new *FLEXline* extenders are working as point to point connection or in a matrix switching system and are compatible with standard network components. The kvm-tec switching manager software is included and the *FLEXline* Extenders are working in the switching system up to 1000 endpoints. A further nice to have, which is as well

included is the kvm-tec software feature "Mouse glide&switch" which makes it possible to control and operate up to 16 PCs with just one mouse and one keyboard.

USB save feature, USB Emulation Mode & USB Sharing and "freeze last image" are further innovative kvm-tec features, which are included with the new product line.

The USB2.0 in-house development and the technology of the products developed by kvm-tec enables a perfect combination of video compression and low (< 5ms) delay time.

There is also a special version – the USBflex available which is working perfectly with all USB devices.

With many options, included upgrades and the dual versions, the new kvm-tec FLEXline has a fantastic price performance ratio.

What else can the ISE 2020 visitors expect – the media4Kconnect – New uncompressed version

Also new at kvm-tec is the media4Kconnect uncompressed: The perfect video transmission allows a delay-free transmission of the signals. Even extreme bit patterns are transmitted true to the original with an ultrahigh resolution 4096x2160@60Hz with 4:4:4@8bit per color, and is working in Switching Systems up to 2000 endpoints

media4Kconnect is available in different versions. As stand alone 4K Extender, uncompressed or redundant. With the unique kvm-tec modular system, the media4Kconnect Extender with an ultra slim housing, is unbeatable in price and performance, as well as in the possible fields of applications.
