The e-ink display that helped save \$167 millions in 2018

Ljubljana, Slovenia, 31 January 2019 - [Visionect](#), developer of premium digital signage technology, is proud to announce the staggering results it achieved in 2018 with its [award-winning](#) meeting room booking solution, [Joan](#).

This ultra-low power device with e-ink display helped companies all around the world to save a total of \$167m in lost productivity last year. As astronomical as it sounds, this figure has been backed by [research](#), which shows that 70% of employees spend about 15 minutes per day searching for a place to meet. A simple calculation will also show that in one year, a business with 50 employees wastes up to 2,100 hours on finding meetings. That's roughly \$50,000 that Joan could save per company.

This is one of the many reasons why Microsoft, KFC, Virgin and Siemens saw the benefits of using Joan to handle their meeting rooms right away and it is because of the support of such companies that Visionect strengthened its position in the marketplace and most recently almost doubled in size and turned over \$7m of revenue in 2018, confirming its status as worldwide leader in the sector.

Our customers praise Joan as a simple and integrated solution to deploy, and this is what we're proud to showcase once again at ISE 2019. The device, which currently supports 19 languages, can be easily installed anywhere indoors as it ships with a magnetic mount which allows for a free and simple placement without the use of any cable, cutting installation costs or expensive wiring. It connects via wi-fi and is designed to seamlessly integrate with companies' calendars that use clients like G Suite, Office 365, Microsoft Exchange and iCalendar.

What makes JOAN truly stand out from its competitors though, is its battery life. Making it an incredibly cost effective and sustainable device, the 6" Joan can run for up to three months on a single charge while the 13" Joan Board can stay on for up to a year.

These are just some of the features that make Joan an attractive solution to boost productivity in the workplace.

Find out more about Joan at ISE 2019 in [Hall 2, Booth B40](#), [Hall 14, Booth A100](#), and [Hall 14, Booth M230](#).

###

About Visionect

Founded in 2007 by brothers Matej and Rok Zalar along with Luka Birsa, Visionect is a worldwide leader in design and development of ultra-low power digital display solutions. Fueled by cutting-edge innovation and years of field-tested deployments, we are changing the way information is being delivered, leading the global revolution with greener and better displays.

Visionect fostered its electronic paper expertise by developing it further in partnership with leading industry players like Microsoft, Epson and E-Ink to create cutting-edge signage technology for several application cases: from traffic signs and public transportation info boards to signage serving the retail, hospitality, healthcare, education and finance industries.

Joan 6" starts at €449 and the 13" starts at €1199.
