PRESS RELEASE

For Immediate Release

VNS Inc. launches new GeoBox multi-angle videowall controller

Innovative one-box solution requires no software for control of unlimited displays rotated at any angle

Taiwan-based VNS Inc. has announced that its new GeoBox video control solution, the super-creative, super-flexible G413 will make its debut at ISE 2020. Allowing users to control multiple videowall displays at any angle (ie, not just 90, 180 or 270 degrees), without the need for additional software, the GeoBox G413 is unique to the market. No other solution allows unlimited angles without a separate software application; the G413 is a 100% one-box processor.

With a 4-channel output, the G413 can control a four-display videowall, whilst daisy-chaining multiple G413s via HDMI 2.0 loop-out ports allows an *unlimited* number of cascading display configurations for large, irregular videowalls.

Users can choose from 22 pre-programmed display modes via the IR remote controller, with no adjustment or setup required, saving time and effort during installation, or can create any display mode they wish for regular and irregular videowall arrays. PIP and POP are included to allow dual views on each display, and input resolution is maximum 4K2K/60Hz or 7680x1200/30Hz.

Other unique features include:

- Dynamic aspect ratio and position adjustment for the entire video wall
- Visualisation of different shapes or cropping area contents on the wall
- Programmable background colours available where content doesn't fit the whole screen
- Seamless looping playback allowing users to configure up to 10 display modes from same source
- Modifiable Preset modes to meet different panel bezel sizes and installation conditions
- System setup and control via IR controller, RS232, USB or Ethernet

“We’re delighted to be able to introduce this unique one-box processor solution for irregular videowalls into Europe,” says VNS Inc. CEO Steve Wang. “There’s nothing available on the market like it, and AV professionals are going to enjoy reduced costs, easier installation and even more immersive and creative videowall experiences once they start using it.”

VNS Inc. is exhibiting in hall 15 at ISE 2020, on booth 15-W265.
