ISE 2020: HELGI PRESENTS THE INTERACTIVE FLAT PANEL

HELGI brings interactivity to the ISE show with the new series of interactive flat panels C and V ultra HD 4K series.

Stand: 5-V50

The new screens are available in 65", 75" and 86" sizes with 20 touch simultaneous, LED, infrared technology, Wi-Fi, Bluetooth and Speaker integrated.

HELGI IFP are 'Zero gap Bonding': it means that there's no air gap between the glass cover and the LCD panel. It translates into a more accurate fingertouch, less reflections, clearer images, zero condensation and contamination issues.

Android technology has a clean, user-friendly interface and the sidebar is always accessible.

HELGI IFP can be provided with the EasiCapture software: a complete software for audio-video recording and editing of lessons, video tutorials, podcasts and videocasts. EasiCapture is an extremely powerful, flexible and easy-to-use solution designed for teachers who want to work innovatively - for example with a "flipped classroom" approach - and for the whole class when it's time to make videos and Movies of any kind.

It is possible to connect devices to the display, mirroring and sharing, show the display content on the device and get remote control over it.

IFP has the Screen Share Pro function: Screen Share Pro is a mirroring, sharing and multidevice collaboration.
The (perpetual) license allows the activation of the Screen Share server app on the Android OS native to the interactive displays and does not limit the number of device clients (Windows, MacOS, Linux, iOS and Android) that can be connected to it using the same WiFi network.

Among the main functions, Screen Share Pro allows to perform bidirectional mirroring (from server to client and from client to server, in split-screen mode up to a maximum of 4 simultaneously connected devices), remote control of Windows, MacOS and Linux devices via touch input from the display - becoming a perfect solution for the wireless management of the interactive display – sending images, audio and real-time videos from client to server, annotations on shared documents.

MDM - READY on IFP

With the cloud-based Chimpa MDM (Mobile Device Management) solution it is possible to have all the tools needed to manage, display, keep safe from data theft and safety breaches all the mobile devices used within the organization.

The device management allows to distribute apps and contents from a centralized cloud server.

It takes just a few minutes to make Chimpa up and running, and its user-friendly interface makes it suitable for any first-time user.

Chimpa is compatible with both iOS and Android operating systems: schools can manage in a centralized way Interactive Flat Panels, smartphone and tablets as well.
