

HELGI PROJECTION SCREENS: INFINITE CUSTOMIZATION POSSIBILITIES

ISE 11th – 14th February 2020
STAND: 5-V50

HELGI projection screens can be customized in any aspect: ratio, sizes, canvases, borders, side tensioning system, screen case color and so much more. It means that the available range of products is able to satisfy any need and to adapt to any kind of use.

A widely consolidated experience, at both a national and international level, allows HELGI to offer a customized and made in Italy product.

A wide range for any need

Motorized projection screens, with **aluminium frame**, **manual** and **portable**: all the products are characterized by the care taken at each step of the production process and by unique features, as **the odorless canvas**, **the wood packaging** for big sizes to guarantee the maximum security during transport, **the customizable sizes** of the canvas, as well as **the color of the screen case**.

'Thumb' technology for Titan screens

It's a technology based on an electric motor coupled with a reducer. The motor wraps and unwraps two steel cables running up both sides of the projection canvas, guaranteeing the perfect tensioning of the canvas, also on giant sizes. HELGI uses the "thumb" technology for Titan screens, which, thanks to their XXL size (up to 12 meters width) are ideal for permanent installations in cinemas, theaters and auditoriums in which the transition from projection to theatrical performance is necessary.

Cori Bend: the ideal solution for panoramic projections

Cori Bends are curved projection screens, with a base from 160 up to 300 cm. Especially used for flight and driving simulators, they are, as all the other product, completely customizable and they offer the possibility of both a floor and a wall installation.

Design and functionality

HELGI screens can combine aesthetics and functionality. The care for certain details and finishes, combined with the choice of high-quality material and with the most modern production technologies, makes HELGI an important reference point in the sector of production and distribution of projection screens.
