

Wide Angel Lens (Throw Rate:0.38-0.9:1)

The projector lens developed by Zorsika itself can well match with the original lens. Our wide angel lens has high brightness (30,000l) and resolution ratio(2K+), and could be applie in a wide range, such as high brightness mercury lamp projectors, and high brightness laser projector.

Lenses are the key part to change the application places of projectors. Zorsika's short lens (wide angel) can bring you the best installation and high-quality experience.
