VISS Black Knight 3.9mm, pure black SMD outdoor, +4000nit, 16bit, will be officially launched during ISE 2019, which will just offer you a nice choice to have one single screen for indoor and outdoor applications. 500x1000mm and 500x500mm tiles compatible, curve-able, lightweight, plus high contrast, this product just gives you almost all you can ask for in corporate events, besides, its "auto lock" mechanism makes your jobs super quick and easy. Another new product that VISS will bring to ISE is also an outdoor EL3.9mm product but features 45 degree cut on both sides, so cubes can be made with this outdoor product, and it is only 10.5kg per tile, which is an advantage for normal corporate jobs, but when you need touring frames for a job, you can also rely on this product as it comes with professional touring frames and dollies too. Last but not the least, VISS will show one of the signature products, the renowned mesh screen, SE series. The latest project of this symbolic product from VISS is the 1700sqm ceiling project in Genting Casino in Malaysia. The recently upgrades of the SE series enable data back-up and real IP65 protection, which makes this product not just suitable for creative effects making but also competitive for outdoor fixed installations since it cuts down heavily the cost on steel structures and labor costs.
