

KLIK Takes Wireless Screen Sharing Mainstream with \$149 KLIK STIK™

Ultra-compact HDMI dongle plugs into—and is powered by—any display or projector, transforming it into a wireless screen for use with any PC or Mobile device.

Bellevue, WA/Amsterdam, NL (February 4, 2019) – KLIK Communications have today unveiled the latest addition to their line of wireless screen sharing devices—the KLIK STIK™—at ISE2019 in Amsterdam.

The device is fully compatible with the native streaming utilities found in Windows, Mac, iOS, Android and Chrome OS, as well as all of the existing KLIK Connect software client apps. KLIK STIK™ measures at under 100mm (4 inches) in length, integrates an HDMI connector and is expected to retail at US\$149 (in the US).

“Think of the KLIK STIK™ as ‘KLIK Boks light’”, states company founder Costa Lakoumentas. “While our enterprise and education clients appreciate the hardware I/O and remote management capabilities of other KLIK models, KLIK STIK™ brings wireless screen sharing to smaller venues and more cost-sensitive applications.”

KLIK STIK™ setup is fully automated, with the KLIK Wizard™ application. Device discovery, network connection, naming, option selection and even custom wallpaper selection are handled by the application through a series of prompts. KLIK STIK™ ships with a USB-combination power cable that provides both power and a connection point for a shared Keyboard, Mouse or Presenter.

KLIK STIK™ is aimed at organizations seeking the benefits of wireless screen sharing at a more accessible cost than other professional streaming solutions. Compatibility with the rest of the KLIK Boks™ line assures a seamless user experience, in facilities that have a mix of KLIK models installed. For more details visit www.klikboks.com/klik-stik

About KLIK Communications Inc.

KLIK Communications is an engineering-driven startup with a mission to create technologies that enhances the way people collaborate in offices, classrooms, meeting spaces and anywhere else ideas are exchanged. Founded in the Seattle area in 2015, the company builds the KLIK Boks™ line of wireless presentation systems, sold by a network of dealers, integrators and distribution partners in the US, Canada, and over 20 countries worldwide.
