

PRESS RELEASE  
INTEGRATED SYSTEMS EUROPE 2019

# SERIES MX

Krix are pleased to be revealing the first European exhibition for Krix Series MX at ISE 2019. Nicknamed the “Wall of Sound”, the Series MX modular range is designed and engineered by Krix, the same Australian company supplying speaker systems to cinema multiplexes for over 35 years and featuring in over 3000 commercial cinemas in more than 30 countries worldwide.

Decades of research and development has allowed Krix to perfect their patented constant directivity horn technology, delivering precision coverage and extremely uniform frequency response - allowing every member of the audience to experience improvements in clarity and definition. Utilising this technology along with sophisticated driver and crossover engineering, Krix are in a unique position to deliver these technologies in a format perfect for residential environments - bringing powerful and crystal-clear cinema sound to your home.

Not only are these modular speaker systems incredibly easy to install, they're hidden behind an acoustically transparent projector screen – providing a clean look while delivering the dynamic movie soundtrack straight through the picture and into your seat, just like the movies!

Paired with the range of Krix surround and overhead speakers, you can achieve seamless, cinematic sound that is faithful to the original movie soundtrack, providing a truly immersive commercial cinema experience at home.

Krix Series MX has been awarded the International HiFi Show Australia's “Best Cinema/ AV Product of Show”, the Sound+Image “Custom Installation Product of the Year” for two consecutive years, and the Sound+Image “Ultimate 30 Audio and AV Award”.

Visitors to Krix booth 14-M205 (Hall 14) at ISE 2019 will be able to experience the huge MX-30 “Wall of Sound”, along with other variants of the Series MX product range.
