

Ksenia forms to new integration partnerships

Ksenia Security has announced the complete integration of lares 4.0 IoT platform with both Crestron and Control 4.

Ksenia Security has completed an integration project between the Lares 4.0 IoT platform for Security and Home Automation and both the Crestron Integrated Systems (Control and Automation) and the Control4 Smart Home Systems.

The Open Platform lares 4.0, in its various IoT Solutions, Hybrid and Wireless, from 16 to 644 I/O, represents one of the very highest levels in terms of power, integration and connectivity. The platform incorporates latest generation components, some of the highest levels of certifications for quality and reliability, and easy scalability with remote programmability even via a mobile phone.

With this system, a single, extremely compact control panel can manage all home automation and security systems performance requirements, and IP/Ethernet connectivity is also supported by a 3G back-up system and vice-versa.
