

Epiphan Pearl captures video with corporate security in sight

October 30, 2018

Palo Alto, CA, October 30, 2018 – Epiphan Video, a leader in professional audiovisual capture, recording, and streaming products is announcing the addition of advanced network security features to their popular Epiphan Pearl™ family of all-in-one video switcher, streamer, and recorder systems.

“These security features make Pearl products extremely IT friendly” says David Kirk, Vice President of Marketing at Epiphan. “The days of AV engineers having to circumvent corporate IT security policies are gone. Managed device authentication and encryption for both content and control are built right in.”

Corporations are constantly improving internal and external communications by leveraging the power of video and live video in particular. Combining AV and IT technology makes adding video gear to the corporate network possible, even easy. Your AV equipment needs to be every bit as secure as network servers and other IT infrastructure. The last thing an IT team needs is a piece of gear on the network that can compromise the security of the network or put confidential content at risk.

“Protecting the network and the content flowing through the network is paramount,” says Kirk, “and as more of that content is live video, in order for AV gear to be IT friendly it needs to be security savvy.”

Along with 802.1x, Pearl firmware upgrade 4.6.0 includes HTTPS, RTMPS and the certificate management that these protocols require. These new additions complement existing security features such as LDAP integration and secure file transfer via SFTP.

About Epiphan Video

Epiphan Video produces world-class, award-winning audio visual solutions to capture, scale, mix, encode, stream, record and play high resolution video including 4K UHD. Our customers include companies that specialize in live event production, education, healthcare, worship, manufacturing, usability, collaboration, security and transportation.

Epiphan’s field-proven product line includes live video production and video streaming systems, external USB-based video grabbers for capturing video and graphics from DVI, HDMI™, SDI and VGA sources and internal video capture cards. Our products are designed in North America and backed by rock-solid technical support.

Epiphan Video is a trade name of Epiphan Systems Inc., a privately owned company incorporated in 2003. Epiphan is based in Palo Alto, California, USA and Ottawa, Ontario, Canada with regional offices and a network of authorized channel partners and OEMs throughout the world.
