

Real-time AI transcription with Epiphan LiveScript

February 4, 2020

Palo Alto, CA, February 4, 2020 – **Epiphan Video**, a leader in professional audiovisual capture, recording, and streaming products announces **LiveScript**, an innovative live transcription solution, at this year's **Integrated Systems Europe (ISE)** conference in Amsterdam and will be demoed at Stand 11-B110.

LiveScript is an AI-based speech-to-text transcription solution that enables everyone to engage with live events as they happen – regardless of any hearing impediment, native language, or distraction.

“Looking at the industry, many post-production transcription services exist, but that doesn’t work for live events because it’s after the fact,” says Greg Quirk, Product Manager at Epiphan. “With LiveScript, all attendees have access to real-time transcriptions of what’s being said for greater accessibility – whether that’s displayed on monitors throughout the venue or on personal smart devices.”

LiveScript combines dedicated hardware with an AI-driven transcription service in the cloud for affordable, real-time transcription. Next generation, AI-based transcription enables LiveScript to transcribe with 85% to 90% accuracy – or better! LiveScript fluidly adds punctuation and on-the-fly corrections based on the confidence of words in context. For even greater accuracy, North American Industry Classification System (NAICS) codes for standardized industry-related terms are supported.

“LiveScript costs a fraction of real-time human transcriptions and has the added benefit of always being accessible,” continued Quirk. “All you need is your LiveScript account plus device, power, an audio input, and a connection to the Internet. You can count on LiveScript for accurate transcriptions that are ready when you are.”

Live transcription is ideal for legislative assemblies, conferences, church sermons, training and education, corporate communications, and any live event where visual accessibility of the spoken message is needed.

General availability of Epiphan’s LiveScript solution is planned for Q2.

About Epiphan Video

Epiphan Video produces world-class, award-winning audio visual solutions to capture, scale, mix, encode, stream, record and play high resolution video including 4K UHD. Our customers include companies that specialize in live event production, education, healthcare, worship, manufacturing, usability, collaboration, security and transportation.

Epiphan's field-proven product line includes live video production and video streaming systems, external USB-based video grabbers for capturing video and graphics from DVI, HDMI™, SDI and VGA sources and internal video capture cards. Our products are designed in North America and backed by rock-solid technical support.

Epiphan Video is a trade name of Epiphan Systems Inc., a privately owned company incorporated in 2003. Epiphan is based in Palo Alto, California, USA and Ottawa, Ontario, Canada with regional offices and a network of authorized channel partners and OEMs throughout the world.
