For Immediate Release

Medialon to Premier New Ruggedized Show Control and Audio Playback Solution at ISE - Showmaster Go

Orlando, Florida – 6 February 2020 – Show control solution provider for museums, attractions and theme parks worldwide, Medialon, will be demonstrating Showmaster Go for the very first time at the 2020 Integrated Systems Europe (ISE) show in Amsterdam, Netherlands.

Designed specifically for attractions and theme parks, Showmaster Go is Ideal for ride vehicles and parade floats due to its size. It's a show control and multi-channel audio playback solution combined into one product, and it comes in a rugged, compact hardware form.

Showmaster Go combines a Pro version Medialon show controller with 16 channels of Dante network audio output.

The new Showmaster Go comes ready loaded with the V6 release of Medialon Manager and will be eligible for free upgrade to the new V7 manager release, coming soon.

Eric Cantrell, VP Business Operations, Medialon, comments, "Measuring in at 145 mm x 152 mm x 44 mm, and weighing just 1.4kg, the little box packs a lot of punch when it comes to controlling audio, video, lighting, animatronics, special effects, interfacing with PLCs and ride controllers, and synchronizing to multiple time sources. We are excited to be premiering this solution at ISE."

In July 2019, Medialon became part of the 7thSense Design family.

The new company, Medialon Ltd., joined the 7thSense Design family and operates from Orlando, FL., with satellite offices across the United States, United Kingdom and Canada.

See Showmaster Go this ISE on the Medialon stand (Hall 15, Stand M290)
