## Audix adds Dante and AES67 to their ceiling mics

### For Immediate Release

**January 31, 2019; Wilsonville, OR** — Audix, a leading US-manufacturer of microphones and wireless microphone systems for the installed sound, stage and studio markets announced today that they are adding the benefits of digital networking to their popular family of installed ceiling microphones, offering Dante and AES67 enabled versions of the M3 tri-element hanging microphone, the steerable flush-mount M70, and the M55 hanging ceiling microphone.

“At Audix we have been pioneering ceiling microphone solutions for conferencing, distance learning and other zone capture applications for over a decade now,” said Gene Houck, Director of Sales at Audix. “We are proud that we offer the widest selection of ceiling microphone models available in the industry today.”

Although Dante is by far the most widely used digital networking platform, Audix is also offering the streaming interoperability of AES67.

“Giving our customers the unique choice of Dante or AES67 enabled microphones is a natural next step that we are excited about,” added Houck. “Look for an expansion of this offering with our desktop microphone solutions in the coming months.”
