## Basalte Home KNX server now available

At ISE, Basalte announced that its new KNX visualisation, Basalte Home, is now available. This comprehensive system combines a design user interface with all needed functions & features for KNX homes. At its heart is the Basalte Core server, which is now shipping worldwide.

Basalte Home is a comprehensive KNX visualisation that completes the Basalte user experience in the intelligent home. You can easily control lights, shades, scenes, music, HVAC, cameras and more at the slightest touch, whether it's through a Sentido switch, the Basalte Home app or the upcoming Ellie touch panel. These controls all share the same Basalte traits: a beautiful user interface with great usability and made of high-quality materials.

**The Basalte Core server** is at the heart of the Basalte Home visualisation. It offers a comprehensive functionality set for KNX home automation systems: from light & shade control over multiroom audio to the native integration of third-party solutions like Philips Hue, door phones, AV gear and more. You can also build logics in KNX. Basalte Core is now shipping.

**Basalte Studio** is the configuration software of Basalte Core: a powerful yet very easy-to-use tool for the KNX system designer. Developed for and already tested by KNX integrators worldwide, Basalte Studio software drastically reduces the complexity and programming time for KNX systems, big and small.

*The Basalte Home app is now available for iOS and Android.*

*KNX integrators who wish to demonstrate the visualisation to clients should contact Basalte.*
