

BASALTE ADDS A SUBWOOFER TO THE AALTO FAMILY

Aalto is basalte's unique collection of high-performance speakers, designed for the world's most exclusive homes. Basalte now completes this collection with a subwoofer, adding more depth and dimension to the customer's listening experience. The dedicated bass speaker takes the entire surround setup to the next level.

Behind its elegant and petite appearance (150 x 240 x 415 mm), the sub hides a tremendously powerful and rich sound. Its 400W amplifier controls the 2 x 6.5" woofers in an impressive way, bringing all your music, movies and TV to life with stunning authenticity.

The active **Aalto** speakers, including the new sub, are characterized by their innovative, architectural build and the variety of top-quality finishes and textures that fit your living room, dining area, home office etc.

Through top-notch Belgian engineering, they beautifully blend studio quality audio with your interior design language. The speaker cabinet is made of aluminium, brass, bronze or nickel, setting a new standard in speaker manufacturing. Aalto beautifully matches your interior finishes and **basalte's** line of luxury light switches. For the front cover, you can choose from a handpicked palette of top quality fabrics made by Gabriel and Kvadrat from Denmark.
