

LUMI Introduces the Latest in Menu Board Solutions at ISE 2020

Modular Designs That Provide Customized Message Delivery

Menu boards convey information in restaurants, shopping, commercial and other areas where dynamic presentations and attention-grabbing displays benefit both the business and consumer. LUMI's new LVC03 Series Aluminum Menu Board Mounting System offers a versatile and cost-effective solution for displaying multimedia and other digital signage content.

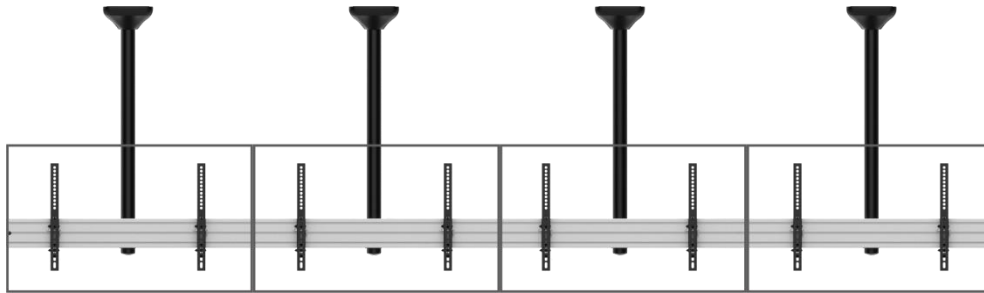

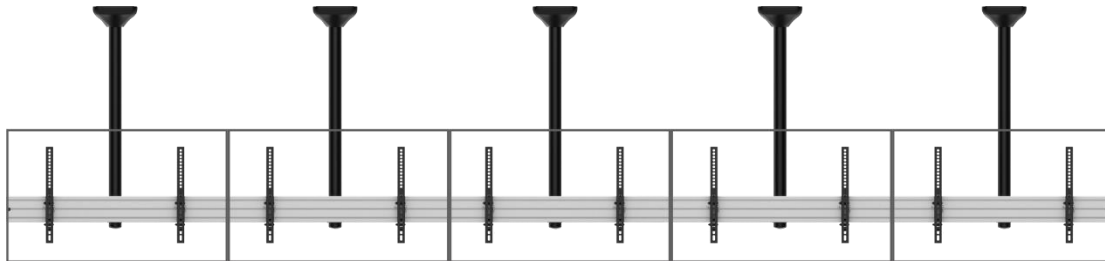

Modular Design with Precise Installation

The proper positioning of displays is key to a successful presentation, and “flat-on” screens simply don’t deliver an optimal viewing experience. The LVC03 Series offers discrete tilt settings, up to 20 degrees, that provides high-visibility, extended range and comfort for the viewer. The modular rail design allows multiple screens to be placed adjacent to one another, providing the installer and designer with the ability to create totally customized solutions.

Components are available separately that work together to form solutions for nearly any installation and application. Mounting rails are available in three preset extrusion lengths that can be joined together indefinitely. Additional customized lengths can be achieved by combining 700mm, 1500mm and 2000mm mounting rails while mounting poles are available in 1000mm and 1500mm lengths to accommodate different spaces.

Affordably priced and innovatively designed, visit LUMI at 2020 ISE 1-E60 & 2-E60 booth for more information about the new LVC03 Modular Menu Board System.
