

# i3-Technologies launches new i3HUDDLE 3.0 as a flexible meeting room solution

*Enabling easy collaboration for small meeting rooms*

**DIEST, BELGIUM, 8 May, 2018** — i3-Technologies, a leading producer of collaboration technology is announcing the launch of the i3HUDDLE 3.0. The i3HUDDLE is a flexible and user-friendly interactive touchscreen for smaller meeting rooms, which integrates seamlessly into existing IT infrastructures. People can just walk into a room and start working with ease. i3HUDDLE looks like a giant tablet or smart phone, and includes a home button, so users will not get lost in complex functionalities. With just 4 options to choose from on the home screen (conference, whiteboard, present, co-create) the interface is sleek and simple.

The i3HUDDLE 3.0 empowers companies by providing great flexibility: to combine with the video conferencing service of choice, to enable whiteboarding, wireless presenting, collaboration with remote team members and saving all documents in their preferred location. Another new feature is the motion sensor which supports automatic start-up and shutdown; smart for the environment, smart for the budget.

i3-Technologies is a young and ambitious collaboration technology brand. Founded in 2013, the company is on a steep growing curve and is proud to be in the position it is today. Major companies have chosen i3-Technologies for their simple yet powerful collaboration solutions. The company's mission is to bring simple and innovative solutions that work in the way your people want to learn and work.

There is a big challenge in bringing simplicity in products that help people to meet and collaborate.

The i3HUDDLE 3.0 now includes a Windows operating system, which is easy to integrate into the infrastructure with which most companies are used to working. IT leaders will appreciate the benefits of the i3HUDDLE with its flexibility and easy user-adoption, while users will love the intuitive interface and capabilities.

**About i3 Technologies:**

i3-Technologies is part of the i3-Group of companies, a privately held, family-owned company founded in 1968 and headquartered in Belgium. The company is one of the world's leading manufacturers of interactive technologies for group collaboration.

The i3-Technologies portfolio of products is available in more than 80 countries and has received numerous awards and recognitions—most recently being selected as a Top 25 Collaboration Technology Company by CIO Applications for 2018. i3-Technologies products are offered through a network of accredited, value-added resellers to ensure best-in-class service and support.
