

Ashton Bentley Little & Large - 43" & 98" Room Systems

Ashton Bentley unveil their new 43" and 98" Room Systems at ISE2020, that add to the current 55", 65" and 75" platforms.

Based on the same modular chassis design the new display solutions will be available in both single and dual screen configurations.

The stunning 98" display is UHD 4K resolution and allows a huge amount of content to be displayed without compromising clarity or performance. Ideal for immersive video calls, large meeting rooms and training environments. The dual 98" system with extended desktop provides a truly phenomenal experience.

The 43" platform is available in FHD 1080p resolution with Tall or Standard height chassis allowing for seamless integration with our Huddle room and standard table offerings.

This product is perfect for any small meeting space or executive office that requires 3-5 users for video/audio conferencing as well as a presentation/collaboration device.

Both solutions come complete with Ashton Bentley's patented proprietary technology within its abox central processor, displays and technology enabled tables. All systems also have broadcast quality speakers, and all cables/brackets and accessories.

Each solution is compatible with most of the industry's leading software/hardware codecs, and all 3rd party devices required within the room are all neatly housed within the chassis., dispensing with the need of any AV equipment racks.
