

Ashton Bentley divides and conquers at ISE Headquarters, Munich

Mike Blackman, MD ISE, said “Thank you to the Ashton Bentley team for taking ISE out of the collaboration dark ages.”

In October 2019, Ashton Bentley completed an extensive upgrade with bespoke furniture fit out with long-time client Integrated System Europe at their headquarters in Munich, Germany.

ISE had two meeting rooms, both with Ashton Bentley systems. The larger 15 seat room became too small as more than 20 people for boardroom style meetings were becoming very frequent.

Some remodelling of the meeting spaces was possible; however, the main concern was to reuse as much of their existing Ashton Bentley equipment as possible!

The Solution: two independent 12 seat rooms effortlessly transformed, by moving a dividing wall, into one large boardroom style space for 30.

Individual spaces, and large combined space, all capable of video calls and presentations.

The modularity of our systems made it simple to reuse existing Ashton Bentley displays, chassis and control from previous installs. Our in-house design team include furniture solution designers and professional AV specifiers, who worked together to create a smart and functional space. Using the latest CAD and CGI software we were able to map and visualise the space correctly, making for a smooth install.

The tables in the two spaces remain in position with a movable joining table sliding into place when the large table is required. Crestron and Shure systems were used for room combining, both systems designed and installed by Ashton Bentley. Finally, the StarLeaf VC systems were integrated into both rooms so independent calls can be made.

Additional Ashton Bentley wall mount displays were also installed to make sure all 30 seating positions, when rooms set up as one large space, could see content.

LOCATION Booth 14-N100 Integrated Systems Europe RAI Amsterdam Feb 11-14 2020
