

► To extend the possibilities of implementing CASY modules, the Belgian rack and stand manufacturer CAYMON developed a flush-mount connection chassis. The CASY052 can be mounted into any wall using one of the 2 available mounting boxes. A durable metal mounting box is available for installations in brick or concrete walls while a pvc variant is available for easy installation into dry walls. The CASY052 box will come available in a 2 space chassis allowing implementation of a custom configuration by using the solderless audio, video and power modules of CASY.

This new addition to the CASY range is a natural step for CAYMON in the pursuit of a full line-up of modular AV & IT solutions. The series already consists out of an entire range of different base frames which allow an extensive range of optional modules to be installed. Resulting in a plug and play, solderless system offering flexible solutions in terms of connectivity, power distribution, internal rack supplies and many more.
