

## LILIN expand License Plate Recognition Solutions

LILIN have introduced two new LPR camera models to their range of ANPR solutions, capable of identifying and recognising license plates on vehicles without need for additional software. These cameras come with built-in allowed, denied and visitor lists which can be configured through the new Smart Alarm menu to perform actions such as opening gates and sending HTTP post signals to Home Automation platforms to create actions and events.

The ZSR8122LPR bullet features a 7-22mm Auto Focus/ Motorized Zoom lens designed to make installation simple- position the camera and remotely focus and zoom the lens via a web browser or the LILINViewer mobile app to optimize the set up and license plate read rates.

A 35M IR distance and a combination of WDR, 3D Noise Reduction, Intelligent Image signal processing and SenseUp+ technology allows the ZSR8122LPR to deliver an outstanding image in low light conditions.

The LPR camera range fully integrates with all current LILIN NVRs, with functions including a text overlay on both live view and recordings, timebar playback of number plate snapshots and event triggering by the camera's denial, allowed and visitor lists. Using the LILINViewer app, clients can receive push notifications for allowed, denied and/or visitor lists; alerting them to vehicles entering the property.
